

Is your daughter protected from cancer of the cervix?

EVERYTHING YOU NEED TO KNOW

Cancer of the cervix

THE SILENT THREAT

No Symptoms
In Early Stages

Spreads Through
Intimate Contact

Affects Women
Of All Ages

Caused By The **Human Papillomavirus (HPV)**

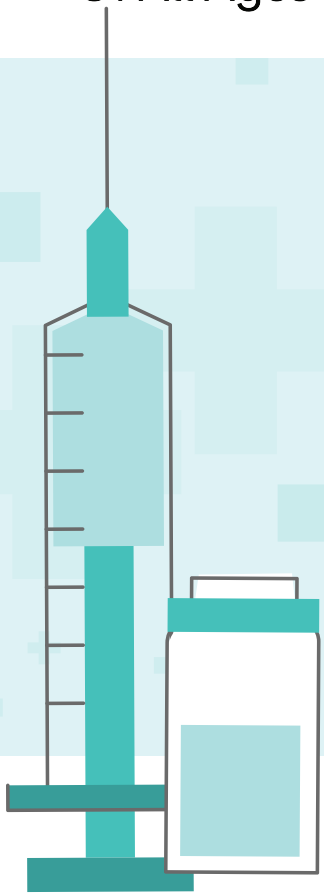

Without primary prevention through vaccination & early detection through screening, cancer of the cervix can lead to serious health complications. If left untreated, it can lead to death.

The Power of Prevention

HPV VACCINE

The **HPV vaccine** is a safe and effective way to shield your daughter from the risk of cancer of the cervix.

The vaccine is most effective when given to adolescents before they become sexually active and is recommended by the WHO.

Why Choose the HPV Vaccine?

Research has shown that the HPV vaccine significantly reduces the risk of cancer of the cervix and other HPV-related diseases including oropharyngeal cancer & cancer of the vulva, vagina & others.

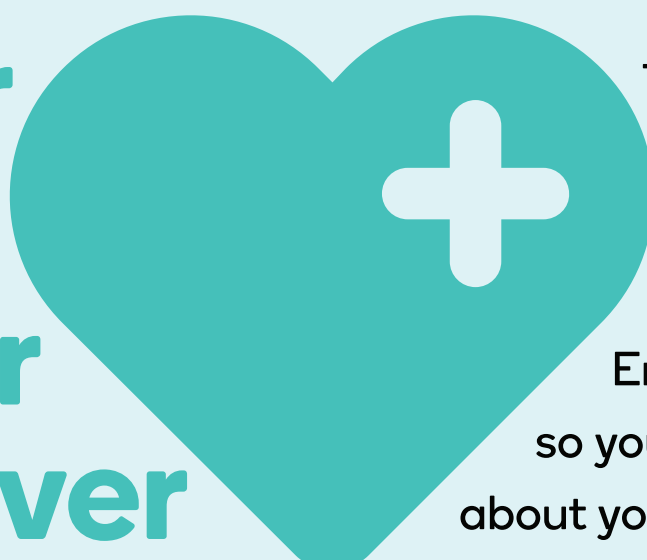

The vaccine has undergone rigorous testing and has been approved by health authorities worldwide.

By vaccinating your daughter, you're investing in her long-term health and well-being.

Your Role as a Parent or Caregiver

Take the first step by engaging with your healthcare provider. Ask questions, seek guidance, and discuss the HPV vaccine. Empower yourself with knowledge so you can make informed decisions about your daughter's health.
